Employee Health Management

July 2018 | Version 2.1

Technology/ LAMP Stack: Linux – Apache – PHP – MySQL (Open Source), HTML5 / JQuery, Android Native SDK, iOS Swift Development, Fully Responsive Design

My Health Meter partnered Intermind as its digital transformation partner to create a comprehensive online software solution and provide an array of health management services to its clients, who comprised of large MNCs that have office setups across the length & breadth of India.

My Health Meter service suite comprises of managing pan India diagnostic centre database, scheduling health check-up appointments for employees, performing follow ups and feedback, digitising health records and storing them electronically, managing the clinical history of employees, monitoring the vital parameter trend based on periodic check-ups and raising an alarm in case of a deviation in parameters from their normal range. My Health Meter runs its own back office operations to execute an extremely complex, effort intensive and data sensitive backend operations that is critical to the business.

Intermind developed the whole solution for My Health Meter comprising of consumer facing applications in the form of web portals and mobile apps. We have also developed an entire enterprise suite consisting of a CRM, Electronic Health Record management and Marketing Automation tools for the backend operations team. Intermind has had a long association of more than 8 years with My Health Meter.

We have continued to support them with further development, improvisation, optimizations and data security of the enterprise solution. The start-up has grown ten fold in terms of revenue and operations and has **40+ big corporate houses** using its services across **400+ cities** in India with approximately **50,000 health profiles** being managed.
